European High Quality Carbide Tips

European German Steel

Laser Cut

## American-German-Engineering

*Extraordinary high quality and yet surprisingly affordable!*

A.G.E.® saw blades are manufactured in Germany to Amana Tool® exacting standards. Laser cut from virgin steel, A.G.E. blades are precisely flattened, ground and tensioned for smooth, balanced cutting. Each A.G.E. saw blade features large carbide tips to ensure clean cuts and a long cutting life. Every step of the manufacturing process is computer-controlled and tightly monitored by scientific inspection equipment which guarantees incredibly tight tolerances and superior performance.

A.G.E. products are ideal for woodworking cabinet shops, millwork shops, furniture makers and other professionals as well as serious woodworking hobbyists who want professional results at a reasonable cost.

The A.G.E. product line has been expanded to offer a larger variety of saw blades and router bits. Flip through the pages of our latest A.G.E. catalog and you'll find a wide assortment of saw blade designs and router bit profiles that are perfectly suited for your next job.

*A.G.E. technology is cutting edge!*

### HEAVY DUTY

#### SPECIFICALLY DESIGNED FOR SMOOTH RIPPING

The low tooth count and large gullets combine to make these blades fast and aggressive. The absolutely flat, laser-cut body ensures precise cuts. The laser-cut expansion slots virtually eliminate vibration and noise. Suitable for use in table saws or gang-rip saws.

⊕ 30mm bore accepts pin-hole arrangements of: 2/10/60, 2/7/42 & 2/9/46.

### THIN KERF

#### IDEAL FOR UNDERPOWERED SAWs

Thin kerf blades reduce waste in expensive materials and require less horsepower to operate. The low tooth count and large gullets combine with the thin kerf to make these blades fast cutting.

Products shown in **bold** indicate most popular items.

**WARNING:** Not recommended for cutting non-ferrous alloys, plastic, laminate and melamine.

**INDUSTRIAL QUALITY**  
**GLUE LINE RIPPING**

### EXTRA SMOOTH FINISH

These special glue line blades shear the wood cleanly so there is no need to joint the stock prior to gluing. The precision triple-chip grind and extra-high hook angle allow aggressive feed rates, yet produce an extra-smooth finish. The thick steel plate and laser cut expansion slots minimize vibration and reduce noise. Use on table saws, sliding table saws, single and gang-rip operations.

**DESIGNED FOR CLEAN CUTS IN PLYWOOD AND SINGLE-SIDED LAMINATES**

These blades are specifically designed for clean cuts in plywood and single-sided laminates. The greater number of teeth, triple-chip grind, and 10° to 12° hook angle provide an excellent balance between feed resistance and finish. To get a chip-free edge on both top and bottom sides of double-sided laminate, it is recommended to use a scoring blade (see page 12) along with these blades; or see pages 17-19 for blades which are specifically designed for double-sided laminate.

#### CUT GAP-FREE MITERS, EVERY TIME

These blades are designed especially for glass-smooth compound miter cuts in moldings & picture frame stock for use in a miter box and single/double miter machines. This style blade is the perfect choice for picture frame and millwork shops. Unlike thinner miter blades which have a tendency to flex and warp, throwing off the miter joint, our blades are stiffer and provide clean burr-free cuts in wood. Special grind, minimal run-out and tight side clearances all combine to yield perfect "gap-free" miters every time!

**CRISP CUTS IN MELAMINE WITHOUT THE NEED FOR SCORING**

The unique hollow-ground design produces crisp, clean cuts in melamine and other coated boards without the need for scoring. These blades pair inverted "V" teeth along with raker teeth and a positive hook. They are particularly suitable for use on vertical panel saws such as those made by Striebig®, Altendorf®, SCM® and Holz-Her®.

### SMOOTH, CLEAN CUTS IN DOUBLE-SIDED MELAMINE

Designed for cutting double-sided melamine and veneered sheet goods on saws without a scoring unit. The H-ATB tooth geometry slices cleanly through fragile coatings and laminates. The high bevel will not "violate" the bottom laminate upon exiting the cut, which causes "blow-out". Extra hard sub-micrograin carbide tips for long life. Recommend using a zero clearance throat plate.

# **INDUSTRIAL QUALITY** **SOLID SURFACE**

## EXCELLENT FOR CUTTING SOLID SURFACE MATERIALS

Specifically designed for cutting solid surface materials such as Avonite®, Dupont Corian®, Wilsonart®, Gibraltar®, Earthstone®, Fountainhead®, Surrell®, Staron® plastic laminate, Plexiglas® and other acrylic based materials. The modified triple chip grind is especially configured to leave a swirl-free cut in solid surface materials. Thicker than normal steel plates reduce vibration that degrades the cut and shortens tool life. Suitable for a variety of saw configurations. The hook angle virtually eliminates self-feeding when used on radial arm saws.

DEMOLITION/RESUE

	<b>DEMOLITION EMERGENCY</b>	EXCELLENT ✓
	<b>ROOFING SHINGLES</b>	EXCELLENT ✓
	<b>NON-FERROUS ALLOYS</b>	EXCELLENT ✓

**! WARNING!**

Demolition blades are **NOT** to be used on multi-purpose cut-off saws or gas powered saws. The teeth of such a blade can catch in the work piece and cause reactive forces, including kickback. The heavier weight of such blades can increase kickback forces, and the aggressive tooth design can cause more severe injuries from blade contact.

According to OSHA's Directorate of Compliance Programs from 1999, portable machines using circular saw blades would become "the functional equivalent of a circular saw" and would, therefore, require guards for both the upper and lower portions of the blade. For the above mentioned reasons, Amana Tool® does not authorize the use of the carbide tipped circular saw blades on all gas powered cutting-off machines, and, in fact, strongly warns against this practice.

**Consult machine owner's manual and follow all instructions and safety procedures, including wearing safety goggles at all times while working with this saw blade.**

**CUTS THROUGH MOST BUILDING MATERIALS**

Designed to cut through roofing shingles, wood, nails, and non-ferrous materials. Each blade comes with two serrated reduction bushings for bore sizes compatible with several machinery manufacturers.

INDUSTRIAL QUALITY

## NON-FERROUS FOR THICK WALLED ALUMINUM

### THICK WALLED

#### SUPERIOR-FINISH CUTS IN THICK ALUMINUM & NON-FERROUS METALS

Designed specifically for cutting relatively thick walled (**greater than 1/4"** thick) aluminum. The special carbide formulation & blade geometry make these blades ideal for cutting aluminum & non-ferrous metal bars such as copper, brass, bronze and lead. The negative hook angle, triple-chip grind & thick steel plates combine to produce a superior finished cut. Use a coolant or blade wax and clamp down the work piece when cutting non-ferrous metals. These blades can also be used to cut other "difficult" materials such as plastic, PVC tubing & fiberglass.

Dia.	Teeth	Kerf MM Inch	Plate MM Inch	Hook Angle	Bore	Tool No.

16"	96	3.8 .150	3.2 .126	-6°	1"	<b>MD16-965</b>

♦ Denotes 5/8" arbor with diamond knockout.

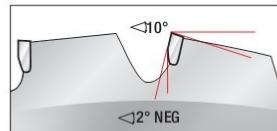

Products shown in **bold** indicate most popular items.

**WARNING:** Never attempt to cut ferrous metals (steel, iron, etc.) with these blades.

### HEAVY DUTY

#### CUT HEAVY GAUGE ALUMINUM HURRICANE SHUTTERS

The rugged design makes these blades well-suited for rough, abusive applications. Used for cutting non-ferrous metals such as brass, copper and aluminum, the teeth feature a "chip limiting" design which limits overfeeding and grabbing of the workpiece. Will also cut wood and plastics. Lubrication will reduce friction and heat, prolonging the life of the blade. For use in radial arm saws, miter saws and table saws.

**WARNING:** Never attempt to cut ferrous metals (steel, iron, etc.) with these blades.

## STEEL for use with LOW RPM SPECIALTY SAWs

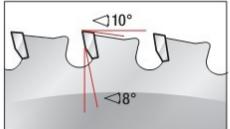

FWF GRIND  
FLAT TOOTH WITH BEVEL LEFT-RIGHT 0° HOOK

ALLOY & VIRGIN STEEL

WWF GRIND  
ATB/ATB 8° HOOK

LOW RPM  
CUTTING SAWs ONLY

### ALLOY AND VIRGIN STEEL

EXCELLENT 

- Cuts through alloy and virgin steels
- Special carbide grade resists breakage, lasts longer
- Chip limiting steel support to prevent over feeding
- Can be re-sharpened

### WARNING!

For use with low RPM chop saws only. Not to be used on multi-purpose cut-off saws or gas powered saws.

Steel Cutting Blades can only be used on dry-cutting chop saws like Jepson™, so long as the recommended RPM is not surpassed. Ganging of materials being cut is not recommended and damage to machinery, saw blades or serious injury to personnel could result! Refer to your machine owner's manual.

### ADVERTENCIA

Solo para uso en maquinas con bajo RPM. No utilizar en sierras de corte multiusos o sierras de gas. Las sierras para corte de metales pueden utilizarse en maquinas de corte seco como Jepson™, con tal que no se exceda el RPM recomendado. Para informacion adicional consulte con el manual de uso de la maquina.

### THE IDEAL BLADE FOR CUTTING ALL METALS

Designed for low RPM specialty saws, these saw blades easily cut through steel studs, steel sheets, metal rods, steel pipes, channels and rebar\*. Specially designed carbide grade resists breakage and lasts longer than standard carbide or abrasive discs. The ideal blade for cutting through all sorts of metal due to its unique tooth geometry, special carbide and its chip limiting steel support.

Cutting high strength rebar materials will reduce blade life due to material toughness

**INDUSTRIAL QUALITY**

# STAINLESS STEEL NEW

for use with LOW RPM  
SPECIALTY SAWS!

## CROSCUT STAINLESS STEELS

New generation of saw blades designed for low RPM dry-cutter and miter saws to crosscut stainless steel without lubrication.

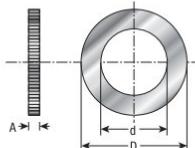

Dia.	Teeth	Kerb	Plate	Bore	Max RPM	Grind	Tool No.
		MM	Inch	MM	Inch		
10"	60	2.2	.087	1.8	.071	1"	2400 TCG SST254-60
12"	72	2.2	.087	1.8	.071	1"	2000 TCG SST305-72
14"	84	2.4	.095	2.0	.079	1"	1700 TCG SST355-84

**WARNING:** Not to be used on multi-purpose cut-off saws or gas powered saws. Not recommended for cutting non-ferrous alloys, wood, glass, concrete or plastic. Optional 1" to 5/8" bushing use #BU-100.

## SAW BLADE BUSHINGS & STABILIZERS

### BORE REDUCTION BUSHINGS

ØD	Ød	A	Tool No.
5/8"	10mm	.053	BU-125
5/8"	1/2	.060	BU-110
3/4"	5/8	.062	BU-150
20mm	3/8	.060	BU-120
22mm	3/4	.062	BU-130
22mm	20mm	.070	BU-140
1"	5/8	.086	BU-100
1"	7/8	.097	BU-225
1"	7/8	.110	BU-250
1"	3/4	.075	BU-200
1"	20mm	.097	BU-122
1-1/8"	1	.086	BU-300
1-1/4"	1	.086	BU-400
1-1/4"	1-1/8	.075	BU-500
1-1/4"	30mm	.086	BU-450
30mm	5/8	.070	BU-515
30mm	3/4	.070	BU-520
30mm	25mm	.070	BU-530

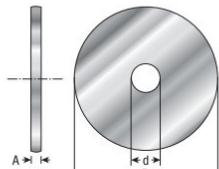

**Note:** Most saw blade bushings have serrations on the outside diameter edge to provide a better grip and fit.

### STABILIZERS/STIFFENERS

The purpose of blade stabilizers is to increase the overall stiffness of the saw blade, thus reducing vibration. Reduction in vibration improves cut quality and dampens noise. Stabilizers are particularly beneficial when used with thin-kerf blades.

Please note the depth of cut will be reduced slightly and interference between the stabilizers and the table insert may occur. You may use one or two stabilizers, depending on the application and arbor length.

Each order number consists of one pair.

ØD	Ød	A	Use with Saw Blade Diameter(s)	Tool No.
4"	5/8	.098 (x2)	8 - 12	STF-4
4"	30mm	.100 (x2)	8 - 12	STF-4-30
6"	1	.100 (x2)	14 - 20	STF-6

## PRO-SERIES

Carbide Tipped Router Bits

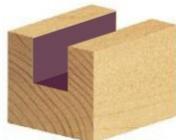

**PRO-SERIES**

## STRAIGHT PLUNGE

**1-FLUTE** 1/4" Shank • Carbide Tipped

A single flute bit should be used where cut speed is more important than cut finish. Improved chip clearance is possible with a single flute, resulting in faster cuts.

ØD	B	Ød	L	Tool No.
1/8	7/16	1/4	2	MD100
1/4	1	1/4	2-1/4	MD102

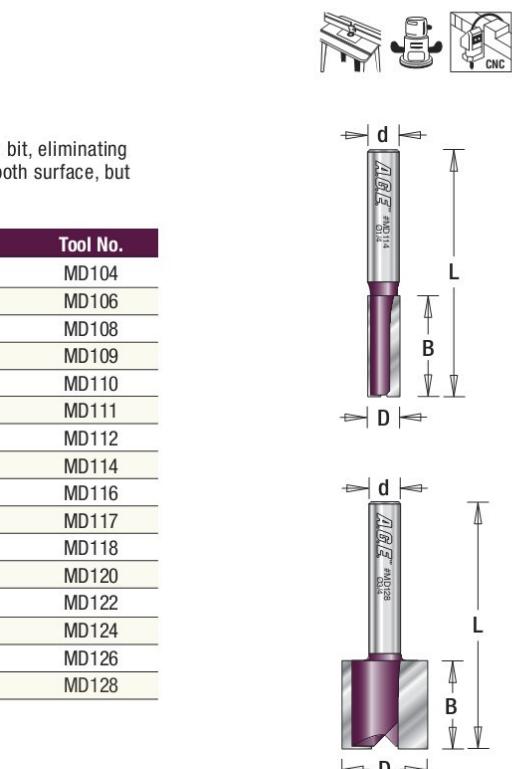

**PRO-SERIES**

## STRAIGHT PLUNGE

**2-FLUTE** 1/4" Shank • Carbide Tipped

Use a two-flute bit where fine finish is paramount. Two flutes balance the bit, eliminating vibration that degrades the cut finish. Two cuts per revolution yield a smooth surface, but feed rate is slightly reduced.

ØD	B	Ød	L	Tool No.
1/16	3/16	1/4	1-3/4	MD104
3/32	1/4	1/4	1-3/4	MD106
1/8	7/16	1/4	2	MD108
5/32	7/16	1/4	2	MD109
3/16	3/4	1/4	2-5/8	MD110
7/32	3/4	1/4	2	MD111

1	1-1/4	1/2	2-7/8	MD154

## PRO-SERIES MORTISING

2-FLUTE • 1/4" Shank • Carbide Tipped

These mortising bits make hardware installation a snap! The carbide tips leave edges sharp for a clean, professional installation, while the large gullet between the two flutes clears chips away quickly. The cutter geometry creates a crisp outline for a perfect fit.

ØD	B	Ød	L	Tool No.
1/2	3/4	1/4	2	MD160
3/4	3/4	1/4	2	MD162

A proper mortising bit should have a large gullet between the two flutes which allows for greater chip clearance and removal.

**PRO-SERIES**

## FLUSH TRIM

**2-FLUTE** Carbide Tipped

Two-flute is a good general-purpose choice, providing fast cuts and good finishes. Use these flush trimming bits for laminate work or for template and pattern work.

ØD	B	Ød	L	Tool No.
3/8	1/2	1/4	2-1/8	* MD204
3/8	1	1/4	2-5/8	* MD206
1/2	1/2	1/4	2-1/4	** MD208
1/2	1	1/4	2-5/8	** MD210

**PRO-SERIES**

## FLUSH/ 7° BEVEL TRIM WITH PILOT

**1-FLUTE** | Solid Carbide

The ideal laminate trimming router bit for high volume production. Solid carbide and integral pilot (no bearing to maintain) extends tool life while the slim configuration reduces vibration.

ØD	B	ød	L	Type	Tool No.
1/4	1/4	1/4	1-1/2	Flush	MD170
1/4	1/4	1/4	1-1/2	7° Bevel	MD172

**PRO-SERIES**

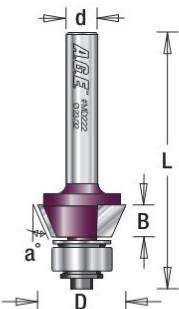

## BEVEL TRIM

**2-FLUTE** Carbide Tipped

Steel bodied router bit for bevel trimming laminate with a standard router. The solid construction reduces vibration for the smoothest possible cut with a two-flute bit.

ØD	B	a°	Ød	L	Tool No.
5/8	1/4	15°	1/4	2-5/64	MD220
1/2	5/16	22°	1/4	1-3/4	MD221

1-1/4	17/32	45°	1/2	2-3/8	* MD254
2	3/4	45°	1/2	2-25/32	** MD256
2-3/8	1	45°	1/2	2-7/8	** MD257

\* Replacement bearing use #47701; \*\* Replacement bearing use #47706

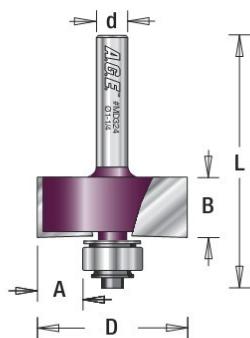

**PRO-SERIES**  
**RABBIT**

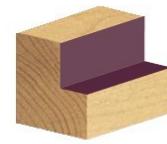

**2-FLUTE** Carbide Tipped

This standard rabbeting bit cuts 3/8" wide and 1/2" deep. Use the multi-rabbet bit in the table below for four different rabbet steps.

ØD	A	B	Ød	L	Tool No.
1-1/4	3/8	1/2	1/4	2-3/64	MD324
1-1/4	3/8	1/2	1/2	2-3/8	MD326

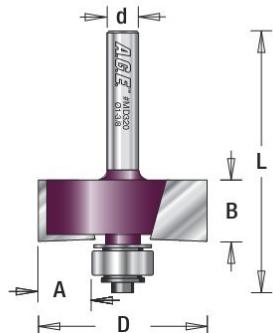

Replacement bearing use #47706

**PRO-SERIES**  
**MULTI-RABBET**

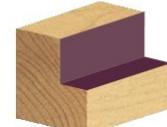

**2-FLUTE** Carbide Tipped

The multi-rabbet bit steps in 1/16" increments from a 5/16" cut width to 1/2", simply by switching ball-bearing guides. Four different bearings are provided. Depth of cut capacity of 1/2".

ØD	A	B	Ød	L	Tool No.
1-3/8	5/16, 3/8, 7/16, 1/2	1/2	1/4	2-1/8	MD320
1-3/8	5/16, 3/8, 7/16, 1/2	1/2	1/2	2-3/8	MD322

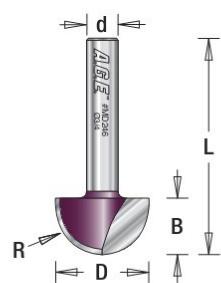

Replacement bearings: 5/16 use #47720, 3/8 use #47718, 7/16 use #47706, 1/2 use #47702

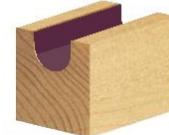

**PRO-SERIES**  
**CORE BOX**

**2-FLUTE** Carbide Tipped

Cut half-round grooves for fluted moldings, columns, millwork and signs using a core box bit. Used with an edge guide, it can cut coves.

ØD	B	R	Ød	L	Tool No.
1/4	1/4	1/8	1/4	1-5/8	MD240
3/8	1/4	3/16	1/4	1-1/2	MD242
1/2	3/8	1/4	1/4	1-9/16	MD244
3/4	7/16	3/8	1/4	1-3/4	MD246

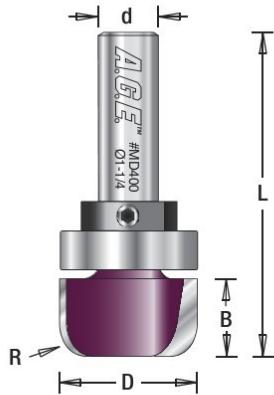

**PRO-SERIES**

## BOWL & TRAY **NEW**

**2-FLUTE** Carbide Tipped

For routing solid wood serving trays, flat dishes, shallow bowls and similar objects. These router bits with ball bearing guide cuts flat, smooth bottom surfaces, vertical walls, and a transition radius between them, all in one pass.

ØD	B	R	Ød	L	Tool No.
1-1/4	5/8	1/4	1/2	2-5/8	MD400

**PRO-SERIES**

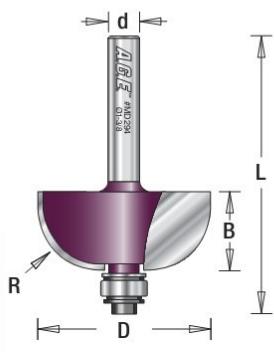

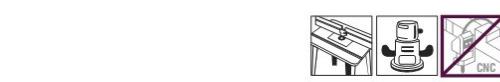

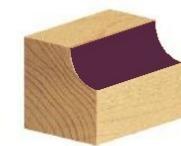

## COVE

**2-FLUTE** Carbide Tipped

The covetto form (produced by the cove bit), is one of the classic building blocks for many molding profiles. Use the cove to detail the edges of casework, doors and drawers, posts and columns.

ØD	B	R	Ød	L	Tool No.
7/8	1/2	1/4	1/4	2	MD290
1-1/8	1/2	3/8	1/4	2-1/16	MD292
1-3/8	5/8	1/2	1/4	2-1/4	MD294

Replacement bearing use #47701

**PRO-SERIES**

## CLASSICAL BEAD & COVE

**2-FLUTE** Carbide Tipped

These classical bead and cove bits combine the two basic forms which are separated by a fillet to create beautiful trim or edge detail.

ØD	B	R	R1	Ød	L	Tool No.
1-1/4	1/2	13/64	5/16	1/4	2	MD300
1-1/2	5/8	15/64	7/32	1/4	2-1/8	MD302

Replacement bearing use #47701

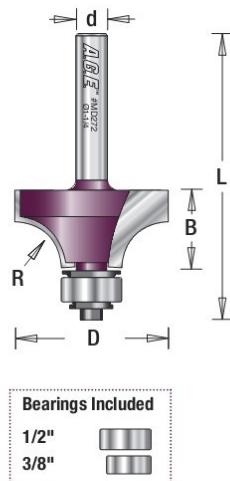

**PRO-SERIES**

## CORNER ROUND & BEADING

**2-FLUTE** | Carbide Tipped

The basic edge-forming bit, the corner-rounding bit, rounds an edge to a given radius. The tool is shouldered to cut a fillet. Can be used to ease edges, as a simple profile, or as a part of a complex one.

ØD	B	R	Ød	L	Tool No.
5/8	15/64	1/16	1/4	1-7/8	MD260

# THIN KERF SAW BLADES

CONTRACTOR PREFERRED

## Thin Kerf

Requires less horsepower and reduces stock loss.

## Electrostatic Coating\*

Non-stick coating reduces friction which protects against rust and resin build-up, resulting in maximum performance.

\*On select blades

## Tri-Foil Brazing

Ultra-strength bonding process which consists of silver & copper, allows carbide tips to endure extreme impact for added durability & overall blade life.

## Laser Cut

## Plate, Bore, Expansion Slots & Stabilizer Vents

Laser cut to ensure rotation accuracy and limit vibration for pin-straight cuts and maximize blade life.

## THIN KERF SAW BLADES

Efficiently cut rough framing lumber, composite materials, soft/hardwoods, chipboard & plywood with the faster and cleaner cuts. Long-lasting, thin kerf carbide tips allow you to frame more decks and houses! Contractors love the smooth finish crosscuts that provides a cleaner edge in soft/hardwood, composite materials, chipboard & plywood for fine framing and decking.
